

TestAnyTime

How to fix license key (USB) detection problem?

TestAnyTime requires a license key to activate the full version. In some instances your computer may fail to detect the license key driver to enable TestAnyTime to change from a trial version to a full version, i.e. see below:

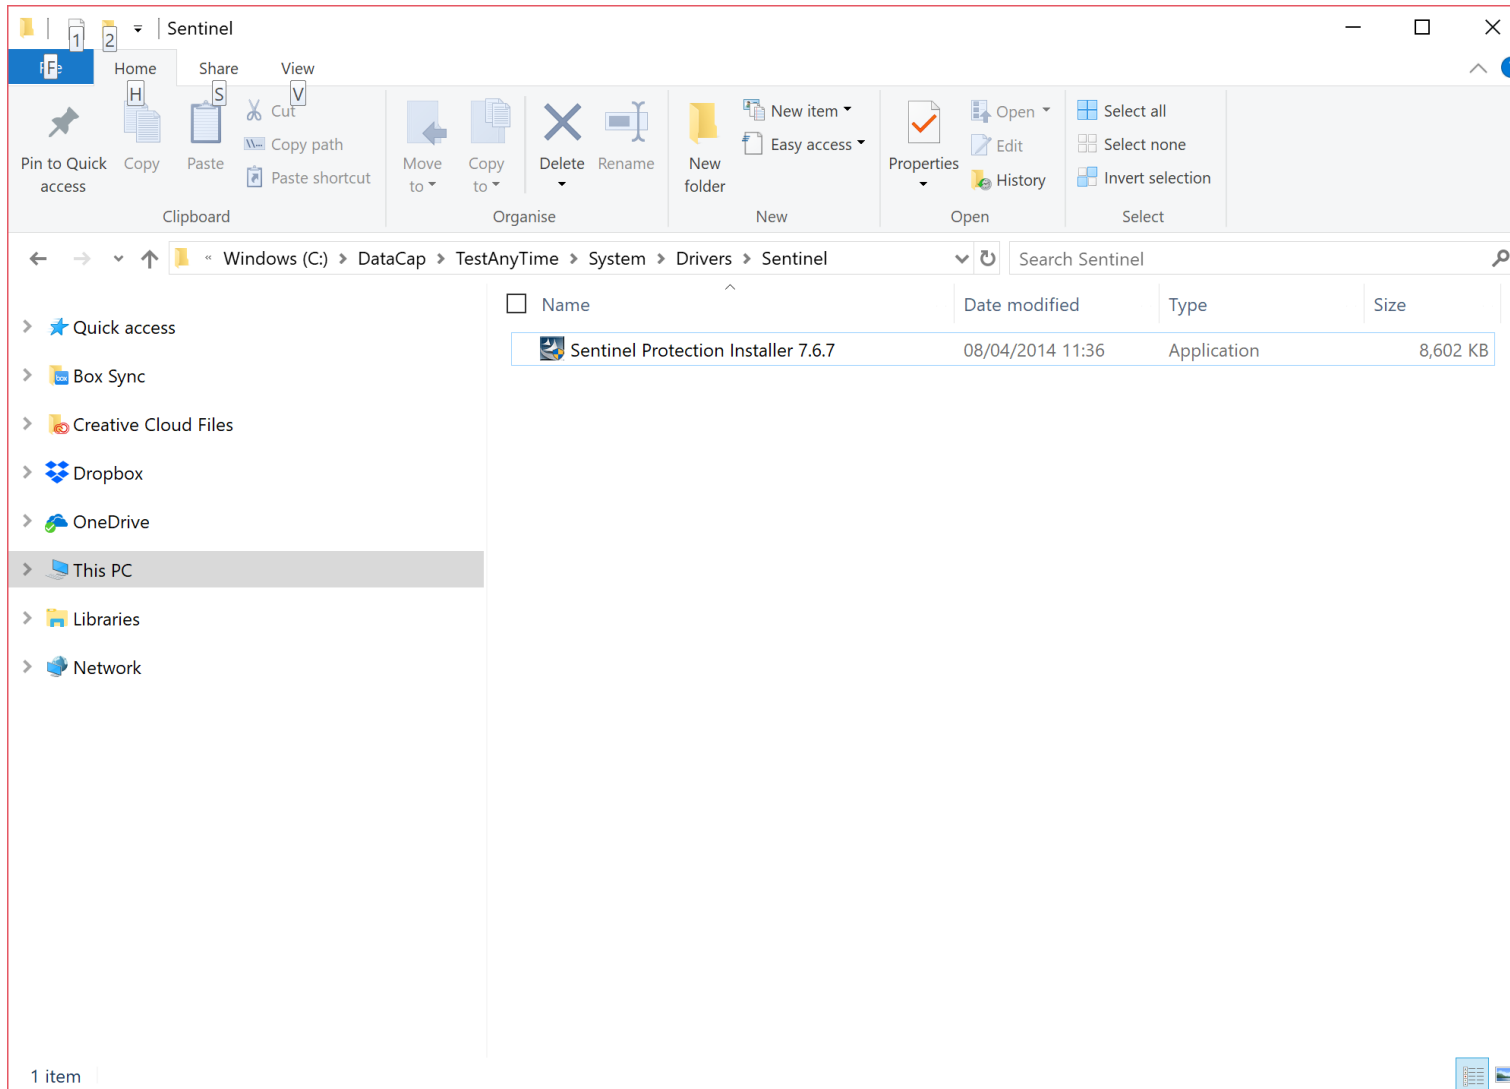

Note:

The 'System trial period was expired' or 'System remain (31) day(s) trial period' message will appear on the bottom right.

1. Open Folder: C:\DataCap\TestAnyTime\System\Drivers\Sentinel

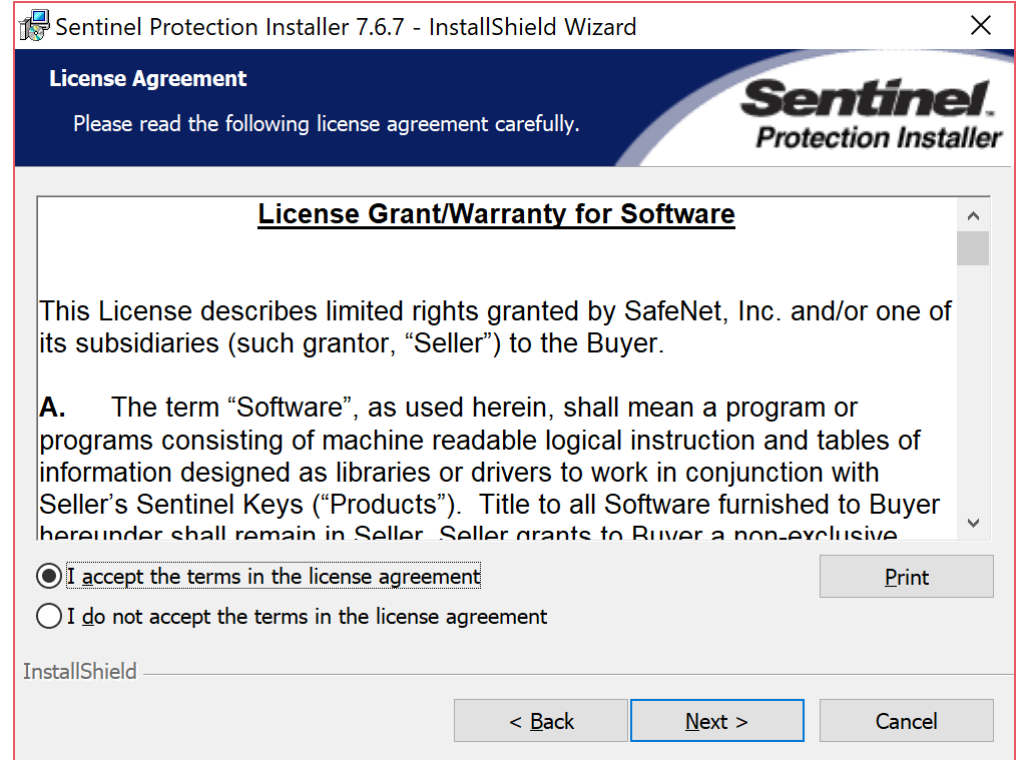

2. Double Click 'Sentinel Protection Installer 7.6.7'

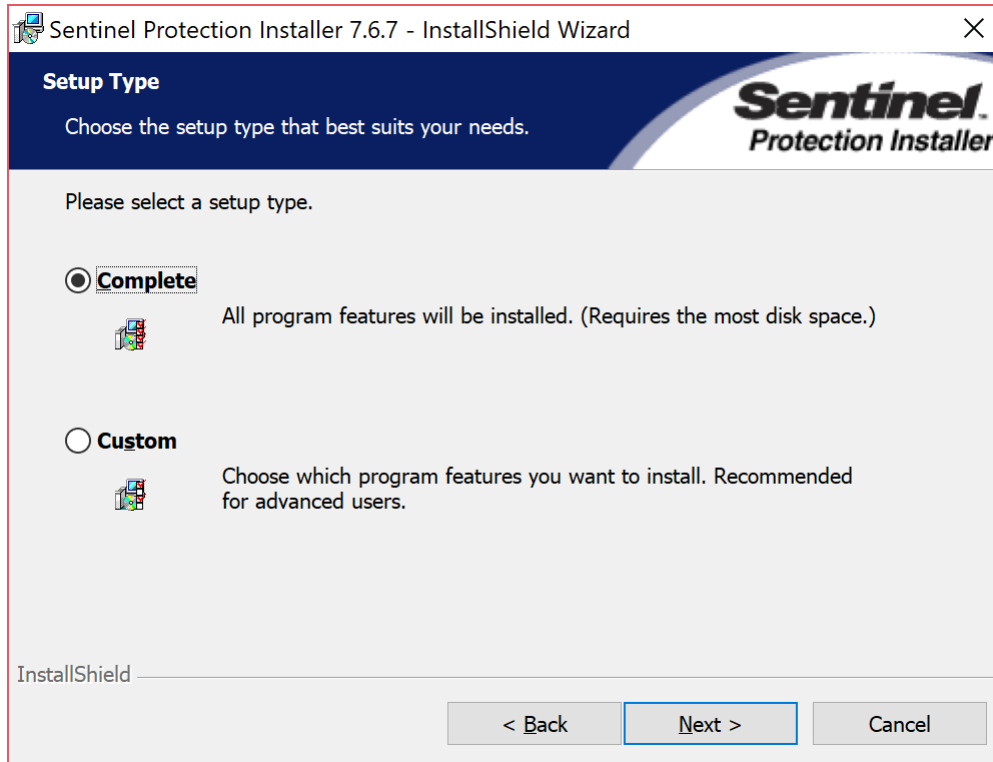

3. Click 'Next' to installation

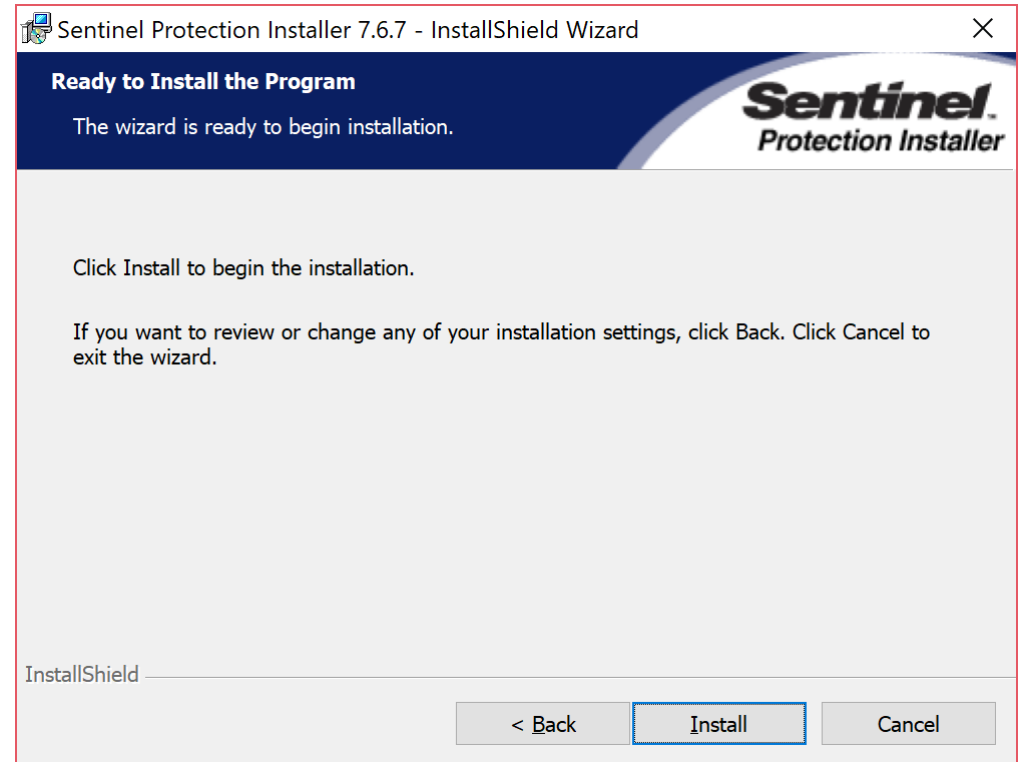

4. Select 'Accept' and 'Next' to continue

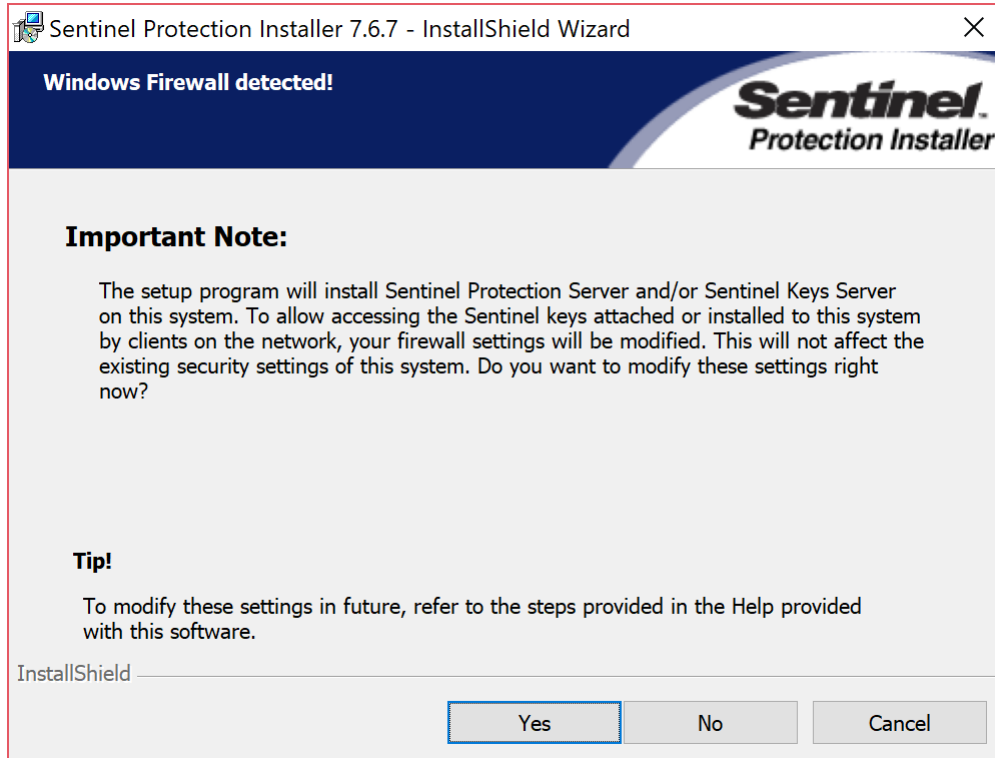

5. Select 'Complete' and 'Next' to continue

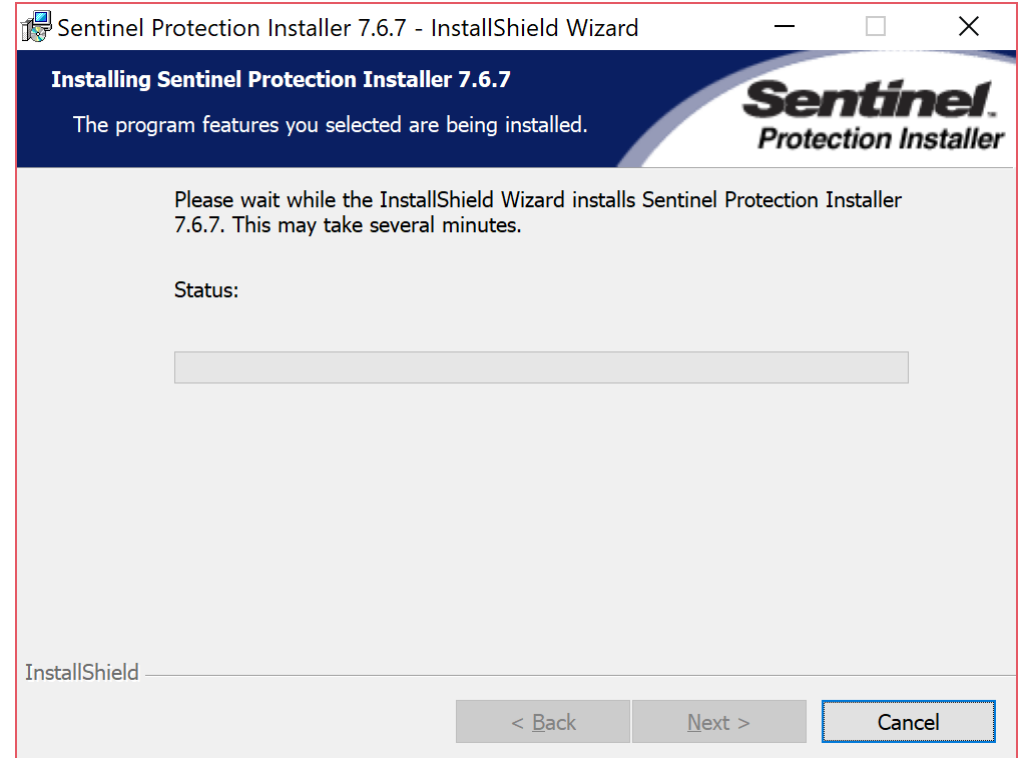

6. Click 'Install' to continue

7. Click 'Yes' to continue

8. Wait till installation is complete

9. Once Installation has finished, restart your computer, plug in the USB license key dongle and open TestAnyTime.
